

Sierra Global Fund - Class P1 (GBP)

As of 2024/04/30

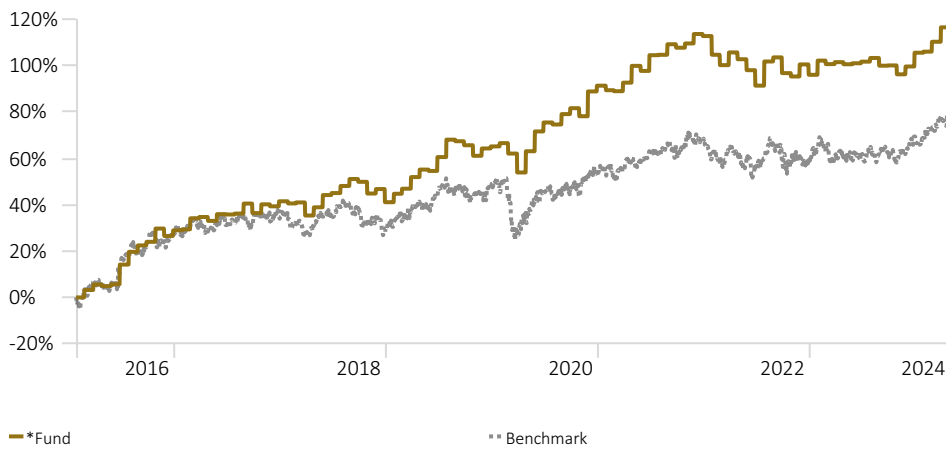

OBJECTIVE

The principal investment objective of the Fund is to achieve the highest potential risk adjusted returns in the chosen investment universe over a medium to long term.

STRATEGY

To achieve the investment objective, the fund invests in a diversified portfolio consisting of listed equities, bonds, properties, and cash across geographical regions and market sectors. The fund utilises a core satellite approach to establish an optimal risk-controlled solution consistent with the strategic asset allocation which targets real returns over the medium to long term. When opportunities present themselves, tactical manager and asset allocation changes will be made in order to achieve long-term outperformance. Whilst portfolio risk is a critical consideration in the portfolio construction process, investors should be comfortable with short term volatility in order to achieve long-term objectives.

MARKET COMMENTARY

April emphasized the ongoing concern regarding persistent inflation, which poses a significant threat capable of disrupting the surge in risk assets.

The month of April proved challenging for both equity and fixed income markets. The release of robust US inflation figures coupled with a seemingly weak initial assessment of the US GDP for the first quarter sparked fears among investors that central banks might delay monetary policy easing. Consequently, both stock and bond markets reacted negatively, witnessing a decline of 3.7% in developed market equities and a 2.5% fall in global bonds over the month. However, emerging market equities managed to buck this trend, recording a modest 0.5% increase due to heightened interest in undervalued Chinese stocks and greater exposure to commodities.

The impact of shifting interest rates was particularly evident in sectors sensitive to such changes, notably small caps and REITs. Small caps experienced a drop of 5.1% in April, while REITs saw a decline of 6.3%, both lagging far behind the overall performance of large-cap markets.

The fixed income arena also felt the repercussions of altered rate expectations, with markets recalibrating their projections for US rate cuts. April witnessed the pricing out of one and a half anticipated rate cuts for the year in the US, pushing back the timing for the first cut. Notably, 2-year Treasury yields surged by 40 basis points to 5.0%, while 10-year Treasury yields rose by 47 basis points to 4.7%.

Commodity prices enjoyed a boost from a resilient economic climate and escalating tensions in the Middle East. The Bloomberg Commodities Index surged by 2.7% in April, emerging as the top-performing major asset class for the month. Rising energy prices, coupled with reduced sensitivity to interest rate fluctuations, buoyed the value segment of the equity market, which outpaced growth-oriented segments.

Despite the overall downturn in markets, European equities outperformed their US counterparts in April. This was attributed to an upswing in the eurozone's flash composite PMI, reaching 51.4, significantly surpassing the recessionary level of 47.6 recorded in December. UK equities, supported by a substantial share of energy and commodity companies, posted positive total returns of 2.5%, emerging as the top-performing equity market for the month.

The S&P 500 experienced a 4.1% decline in April, as rising bond yields exerted pressure on valuations. Nonetheless, the economic landscape remained conducive to corporate earnings, with many companies surpassing expectations during the first quarter earnings season. However, investors displayed a heightened willingness to penalize companies falling short of estimates, scrutinizing whether earnings justified the previous valuation expansion.

Japanese equities relinquished some of the gains accumulated over the previous months due to widening interest rate differentials between Japan and other developed markets, which weighed on the yen and fueled concerns about imported inflation dampening domestic demand.

* Returns prior to the 12th of June 2023 are pro forma in nature. Past performance is not a reliable indicator of future results. The portfolio's share prices fluctuate and are not guaranteed. Returns may decrease or increase as a result of currency fluctuations. When making an investment in the portfolio, an investor's capital is at risk. See disclaimer and disclosures for important information regarding this Minimum Disclosure Document.

Sierra Global Fund - Class P1 (GBP)

As of 2024/04/30

GLOSSARY

Total Investment Charge (TIC) is the sum of the Total Expense Ratio (TER) and the Transaction Costs (TC).

Total Expense Ratio (TER) is the global standard used to measure the impact that the deduction of management and operating costs has on a fund's value. It gives you an indication of the effects that these costs have on the future growth of your investment portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Also, the current TER may not necessarily be an accurate indication of future TERs.

Transaction Costs (TC) is a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decision of the investment manager and the TER. Calculations are based on actual data where possible and best estimates where actual data is not available. Standard Deviation (STD Dev) is a statistical measure of the dispersion of returns for a given security or market index.

Sortino Ratio measures the risk-adjusted return of an investment asset, portfolio or strategy. It is a modification of the Sharpe ratio but penalizes only those returns falling below a user-specified target or required rate of return, while the Sharpe ratio penalizes both upside and downside volatility equally.

Max Drawdown is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Max drawdown is an indicator of downside risk over a specified time-period.

Sharpe Ratio is a measure for calculating risk adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk.

DISCLAIMER

This Fund is a cell of PIM Capital Ltd PCC. PIM Capital Fund Services is registered with the Financial Services Commission in terms of Section 72(6) of the Financial Services Act, managing Collective Investment Schemes in Mauritius. Prime Collective Investment Schemes Management Company (RF) (Pty) Ltd ("Prime CIS") is a registered Collective Investment Schemes Manager in terms of Section 5 of the Collective Investment Schemes Control Act (CISCA) and the South African representative office for this fund. Prime CIS is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a full member of the Association for Savings & Investment SA (ASISA). Persec International Ltd has been appointed as the Fund's trustee/custodian. The fund is approved under Section 65 of the CISCA by the Financial Sector Conduct Authority of South Africa.

Collective Investment Schemes (CIS's) are generally medium- to long-term investments. The value of participatory interests or the investment may go down as well as up, and therefore the manager does not make any guarantees with respect to the protection of capital or returns of the investment. Past performance is not necessarily a guide to future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. The portfolio may include underlying foreign investments, and may as a result be exposed to macroeconomic, political, foreign exchange, tax, settlement, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. The underlying foreign investments may also be adversely affected by foreign investment policies, restrictions or repatriation of investments and other restrictions and controls that may be imposed by the relevant authorities of the relevant countries. The manager reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate.

Investors in the Fund are not protected by any statutory compensation arrangements in Mauritius in the event of the fund's failure. The Mauritius Financial Services Commission does not vouch for the financial soundness of the fund or for the correctness of any statements made or opinions expressed with regard to it. In certain circumstances a participant's right to redeem his shares may be suspended. Excessive withdrawals from the fund may place the fund under liquidity pressure and in such circumstances, a process of ring-fencing withdrawal instructions and managed pay-outs may be followed. Commission and incentives may be paid and if so, will be included in overall costs. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Fund valuations take place at approximately 12h00 (MUT) each business day and forward pricing is used. Instructions must reach the manager before 16h00 (MUT) one day prior to the dealing date. You can expect to receive withdrawal pay outs five business days after the dealing day. Large investments or redemptions (exceeding 5% of fund value) may be subject to an anti-dilution levy to defray dealing costs and expenses. This levy, where applicable, is applied fully for the benefit of the fund. A schedule of fees and charges, maximum commissions and a schedule of similarities and differences is available on request from the manager.

Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the fund as well as for the individual investor. Income distributions are included in the performance calculations. Performance numbers and graphs are sourced from Morningstar. NAV to NAV figures have been used. Performance may differ as a result of initial fees, the actual investment date, the date of reinvestment. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Mandatory cost disclosure as per the regulator: \$3,750.00 recoverable in the first year from launch date (refer to prospectus). \$5,000.00 p.a. Audit Fee. \$500.00 p.a. Annual FSC fee.

Total Expense Ratio (TER) is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund is excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1-year TER is for the 12 months to end of February (updated annually). The 3-year TER is for a rolling 36-month period to the last quarter end (December, March, June and September). Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER. The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

The manager does not provide financial advice. Prospective investors should seek appropriate professional advice before making any investment decision. If you choose to appoint an adviser, advice fees are contracted directly between you and the adviser. This is a Minimum Disclosure Document (MDD) and intended for information purposes only and does not constitute investment, legal, tax or other advice or any recommendation to buy or sell the securities herein mentioned.
